The Scholarship Committee,
Mohamed bin Zayed University of Artificial Intelligence (MBZUAI),
Abu Dhabi, United Arab Emirates.

Dear Members of the Scholarship Committee,

LETTER OF RECOMMENDATION FOR ABDULHAKIM ABDURRAZAK SULAIMAN

I am delighted to recommend Abdulhakim Abdurrazak Sulaiman for admission to the Master of Science in Computer Science programme at the Mohamed bin Zayed University of Artificial Intelligence (MBZUAI), with consideration for scholarship support. I had the opportunity to teach Abdulhakim courses in Machine Learning Fundamentals, Big Data Analytics, Python Programming, Digital Image Processing, and Emerging Technologies at the Department of Computer Engineering, Ahmadu Bello University, Zaria. I also supervised his final-year project, which allowed me to observe his development beyond the classroom and assess his approach to technical problem-solving and independent work.

Through these academic interactions, I became familiar with Abdulhakim's interest in computing and his engagement with areas that form an important foundation for modern artificial intelligence research. His coursework exposed him to programming, machine learning concepts, data analysis, and digital image processing. Together, these subjects provided opportunities to develop the computational knowledge and analytical skills needed to investigate problems involving data, algorithms, and intelligent systems.

Through my supervision of Abdulhakim's final-year project, NetConnect, I was able to assess his ability to apply computing principles to a substantial engineering problem. He developed a local-network messaging application that supports direct and group messaging, file sharing, JWT-based authentication, and real-time communication using WebSockets. The project involved developing both a Flutter client and a FastAPI backend, with SQLite serving as the database. He also documented the system's implementation and evaluation in his undergraduate thesis. This work demonstrates his ability to integrate multiple technologies, reason about software architecture, and undertake a substantial technical project. Combined with his academic exposure to machine learning, big data analytics, Python programming, and digital image processing, this experience provides a foundation on which he can build through advanced study and research in computer science.

I consider the combination of Abdulhakim's computer engineering background and his exposure to machine learning, programming, and data analytics to be a useful foundation for graduate study in computer science. I believe that further training in a rigorous research environment would enable him to deepen his understanding of artificial intelligence, strengthen his research methodology, and explore how computational techniques can be applied to meaningful real-world problems.

In addition to his technical preparation, Abdulhakim has demonstrated a commitment to his academic and professional development. He has the potential to benefit from an environment that encourages intellectual curiosity, critical thinking, collaboration, and sustained engagement with challenging research questions. I believe that MBZUAI would provide an appropriate setting for him to build on his undergraduate training and develop into a capable computing professional and researcher.

Based on my experience teaching and supervising Abdulhakim, I am pleased to recommend him for the M.Sc. in Computer Science programme at MBZUAI and for consideration for scholarship support. I believe that he has the potential to grow through advanced study and make constructive contributions to the university's academic community.

Please feel free to contact me should you require any further information regarding this recommendation.

Yours Sincerely,

Y. Ibrahim, PhD
Senior Lecturer,
Dept. of Computer Engineering, ABU Zaria, Nigeria.
